Static pages module for Invenio.

This is an experimental developer preview release.

- Free software: GPLv2 license
- Documentation: <https://invenio-pages.readthedocs.io/>

CHAPTER 1

User's Guide

This part of the documentation will show you how to get started in using Invenio-Pages.

Installation

Usage

Static pages module for Invenio.

CHAPTER 2

API Reference

If you are looking for information on a specific function, class or method, this part of the documentation is for you.

API Docs

Static pages module for Invenio.

```
class invenio_pages.ext.InvenioPages(app=None)
    Invenio-Pages extension.

    Extension initialization.

    Parameters app – The Flask application. (Default: None)

    init_app(app)
        Flask application initialization.

        Parameters app – The Flask application.

    Returns The invenio_pages.ext.InvenioPages instance initialized.

    init_config(app)
        Initialize configuration.

        Parameters app – The Flask application.

    static wrap_errorhandler(app)
        Wrap error handler.

        Parameters app – The Flask application.
```

Configuration

Page module config.

```
invenio_pages.config.PAGES_DEFAULT_TEMPLATE = 'invenio_pages/default.html'  
Default template to render.
```

```
invenio_pages.config.PAGES_TEMPLATES = [('invenio_pages/default.html', 'Default'), ('invenio_pages/dynamic.html',  
List of available templates for pages.
```

```
invenio_pages.config.PAGES_WHITELIST_CONFIG_KEYS = ['THEME_SITENAME']  
List of configuration variables accessible in the dynamic pages.
```

Models

Pages module models.

```
class invenio_pages.models.Page(**kwargs)
```

Represents a page.

A simple constructor that allows initialization from kwargs.

Sets attributes on the constructed instance using the names and values in kwargs.

Only keys that are present as attributes of the instance's class are allowed. These could be, for example, any mapped columns or relationships.

content

Page content. Default is pages/templates/default.html

description

Page description.

```
classmethod get_by_url(url)
```

Get a page by URL.

Parameters `url` – The page URL.

Returns A `invenio_pages.models.Page` instance.

id

Page identifier.

template_name

Page template name.

title

Page title.

url

Page url.

```
validate_template_name(key, value)
```

Validate template name.

Parameters

- **key** – The template path.
- **value** – The template name.

Raises `ValueError` – If template name is wrong.

```
class invenio_pages.models.PageList(**kwargs)
```

Represent association between page and list.

A simple constructor that allows initialization from kwargs.

Sets attributes on the constructed instance using the names and values in kwargs.

Only keys that are present as attributes of the instance's class are allowed. These could be, for example, any mapped columns or relationships.

id

PageList identifier.

list

Relation to the list.

list_id

Id of a list.

page

Relation to the page.

page_id

Id of a page.

Views

Views for Pages module.

`invenio_pages.views.handle_not_found(exception, **extra)`

Custom blueprint exception handler.

`invenio_pages.views.preload_pages()`

Register all pages before the first application request.

`invenio_pages.views.render_page(path)`

Internal interface to the page view.

Parameters `path` – Page path.

Returns The rendered template.

`invenio_pages.views.render_string(source)`

Render a string in sandboxed environment.

Parameters `source` – A string containing the page source.

Returns The rendered template.

`invenio_pages.views.view()`

Public interface to the page view.

Models: `pages.pages`. Templates: Uses the template defined by the `template_name` field or `pages/default.html` if `template_name` is not defined. Context: page `pages.pages` object.

CHAPTER 3

Additional Notes

Notes on how to contribute, legal information and changes are here for the interested.

Contributing

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

Types of Contributions

Report Bugs

Report bugs at <https://github.com/inveniosoftware/invenio-pages/issues>.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” is open to whoever wants to implement it.

Implement Features

Look through the GitHub issues for features. Anything tagged with “feature” is open to whoever wants to implement it.

Write Documentation

Invenio-Pages could always use more documentation, whether as part of the official Invenio-Pages docs, in docstrings, or even on the web in blog posts, articles, and such.

Submit Feedback

The best way to send feedback is to file an issue at <https://github.com/inveniosoftware/invenio-pages/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

Get Started!

Ready to contribute? Here's how to set up *invenio* for local development.

1. Fork the *invenio* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/invenio-pages.git
```

3. Install your local copy into a virtualenv. Assuming you have `virtualenvwrapper` installed, this is how you set up your fork for local development:

```
$ mkvirtualenv invenio-pages
$ cd invenio-pages/
$ pip install -e .[all]
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass tests:

```
$ ./run-tests.sh
```

The tests will provide you with test coverage and also check PEP8 (code style), PEP257 (documentation), flake8 as well as build the Sphinx documentation and run doctests.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -s -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests and must not decrease test coverage.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring.
3. The pull request should work for Python 2.7, 3.3, 3.4 and 3.5. Check https://travis-ci.com/inveniosoftware/invenio-pages/pull_requests and make sure that the tests pass for all supported Python versions.

Changes

Version 1.0.0a4 (released 2017-08-18):

- Update minimum Flask version to 0.11.1.
- Improve documentation and examples.

Version 1.0.0a3 (released 2016-06-15):

- Major refactoring for Invenio 3.
- Adds versioning support for pages.

Version 0.1.2 (released 2015-10-07):

- Removes calls to PluginManager consider_setuptools_entrypoints() removed in PyTest 2.8.0.
- Adds missing *invenio_base* dependency.

Version 0.1.1 (released 2015-08-25):

- Adds missing *invenio_upgrader* dependency and amends past upgrade recipes following its separation into standalone package.
- Overrides default wtforms field for content column in order to display it properly. (closes inveniosoftware/invenio#3311)

Version 0.1.0 (released 2015-07-22):

- Initial public release.
